

PERFORMANCE BOOTH COAT

Ford Tox no: 155065 C2

Booth coat is a water based coating for paint spray booths to prevent the build up of over spray on walls, windows and lights.

Booth coat gives a clean, tacky coat, which will prevent adhesion of paint over spray to booth areas and also reduce particulates and dust. The excellent clarity of the 'dried' film allows use on large glass areas and lighting units without effecting brightness.

Booth coat may be applied either by brushing, roller or airless spray equipment. Optimum clarity will be achieved by spray application. The film does not need to 'dry' prior to use although maximum protection / clarity is given after allowing 1-2 hours for evaporation of water from the film.

Booth coat is removable with water thereby eliminating the need for solvent wash downs and the consequent reduction in voc emissions. After the paint over spray has built up to unacceptable level (such as loss of clarity on glass areas) the booth coat should either be removed totally with a brush and water / pressure brush or wiped/ scraped which will leave a thin film. Washing down into the booth water will not cause foam or affect the paint coagulation process.
