

CITROSOLVE - CHEWING GUM AND ADHESIVE RESIDUE REMOVER

LONDON UNDERGROUND PART NO: 17261/155

COMPOSITION

Citrosolve principally consists of a naturally derived, biodegradable solvent obtained from citrus peel. The product is a colourless/yellow clear liquid with a citrus odour. Citrosolve successfully replaces Chewing Gum removers based on ozone depleting products.

APPLICATIONS:

Citrosolve can be used to remove chewing gum from floors, walls and seat covers etc. The product is also effective at removing adhesive residues (from posters/self adhesive labels) and footwear scuff marks.

Citrosolve will not degrade metal, wooden or concrete surfaces. Care should be taken when used on rubber, plastic or painted surfaces. To prevent damage to these surfaces avoid prolonged contact, and wash surfaces after use.

Successful trials have been carried out with Citrosolve when used on concrete and rubber floorings and when used to remove chewing gum and adhesive residues from metal surfaces of vehicles.

METHOD OF USE

Always trial a test patch before extensive use on any surface. It is suggested that the user removes as much chewing gum/adhesive as possible with a plastic scraper and then uses citrosolve to remove the remainder. Apply by cloth, cotton swab, paper towel or spray. Wash surfaces after use to remove any solvent residue.

For glue / adhesive and rubber marks spray or wipe on with a cloth, rub gently, then wipe / rinse off.

SAFETY PRECAUTIONS

Citrosolve has a flashpoint of 49°C and is classified as flammable. Store away from sources of heat or naked flames. Do not smoke when using Citrosolve. Avoid breathing mists or sprays. Use in a well ventilated area. Avoid contact with skin or eyes. Wear suitable protective clothing. If inadvertent skin or eye contact should occur, wash/irrigate immediately with plenty of water. For detailed health and safety information, request a hazard data sheet.

PACKAGING 5 litre drums and 750ml trigger sprays.
